## KC SERIES

### Product Description

The analog switching relay works in accordance with the phase angle control principle, i.e. the output switching point in the AC sine wave depends on the control current. 4mA corresponds to no switching and 20mA corresponds to full sine wave (near linear power response). The relay switches off every time the output current crosses zero, and switches ON in accordance with the applied control current

## OUTLINE DIMENSIONS

(unit:mm)

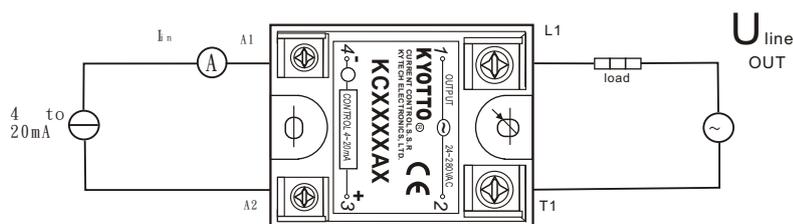

## EQUIVALENT CIRCUIT

## Applications

This relay is suitable for control of heaters, lighting and slightly inductive loads such as small fans. The relay can also be used for soft turn-on of high-power incandescent lamps.

## Transfer Characteristics

Output power as a function of control input (4 to 20mA)

I in [mA]	P out [%]
4	4
6	13
8	25
10	38
12	50
14	62
16	75
18	87
20	100

### Attention:

In order to be in compliance with the EMC Directive an additional common mode choke and X2 capacitor at the output is required if the SSR is operated as single component. In case the SSR is incorporated in an appliance the existing EMI Filter may provide the required EMI suppression. The EMI Filter Must be placed as close as possible to the output terminals. See also above.
