## FUZETEC TECHNOLOGY

Founded in 1997, as a world leading device manufacturer and designer, Fuzetec Technology Co., Ltd. (FUZETEC™) is committed to provide continuous circuit protection solutions to today's and tomorrow's electronic and electrical industries.

With the most advanced Positive Temperature Coefficient (PTC) conductive polymer technologies, FUZETEC™ offers a wide variety of Polymeric PTC resettable fuses to fulfill the needs of modern demanding high-tech applications. They include, but are not limited to: Telecommunications, Networks, Smart Phone, Tablet PC's, Notebook PC's, Computers & Peripherals, Automotives, Instrumentation & Industrial Controls, Power Supplies, Consumer Electronics and Primary & Secondary Batteries etc.

## FUZETEC™ PRODUCT FAMILY

FUZETEC™ product families are designed for global demanding electronic and electrical industries. Its resettable feature, compact size, flexible design construction, low thermal output and competitive cost out performed the traditional fuse, Ceramic PTC, Bimetal fuse and Current control IC. They are ideal for wide range voltage DC and AC applications. FUZETEC™ resettable fuses (PTC Thermistor, PTC VARIABLE RESISTER, Variable Resistance PTC Thermistor, Variable Resistor, Current Limiter) are offered in a variety of constructions, which include: Radial Leaded (16V, 30V, 60V, 90V, 120VAC, 240 VAC, 250V & 600V), Surface Mount (0603, 0805, 1206, 1210, 1812 & 2920 sizes) and Axial Leaded (for all battery pack applications and others). In addition to standard products, FUZETEC™ also offers a variety range of custom design devices (i.e. Disc Type).

## SAFETY, QUALITY AND CUSTOMER SATISFACTION

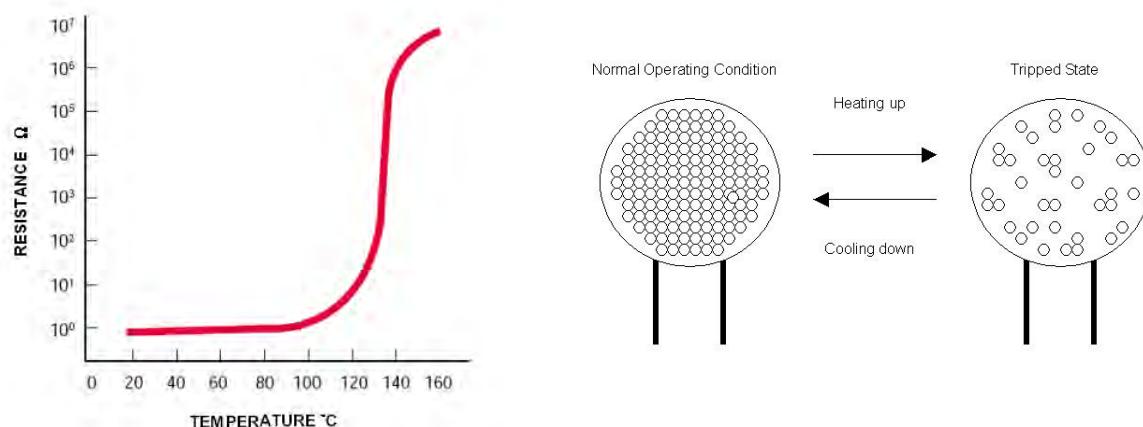

With third party approvals (UL, C-UL and TÜV), FUZETEC™ products are ensured to provide long lasting safety and performance. From product design and development, through manufacturing and quality control to delivery and shipment, Fuzetec Technology strictly implements ISO/TS16949:2009, ISO9001:2008 and ISO14001:2004 quality standards to assure its products' quality and consistency. With continuous improvement, we are committed to provide top products and services to better satisfy our customers' needs. We strongly believe that excellent partnership between customers and us are the best and the only route to achieve success in tomorrow's competing business world.

## TECHNOLOGY NICHE

Polymeric PTC material and devices technology synergistically integrate the advanced polymer material technologies, conductive material science, novel processing engineering, and fundamental electronic and electrical theory. Electrical resistance of such material and devices increases with temperature increases and vice versa. When experiencing "overcurrent and/or over voltage", the device generates thermal energy (**Energy = I\*V**) and heats up itself. This makes the polymer matrix's morphology change from crystalline to amorphous phase, and results in a resistance increase of thousand orders of magnitude such that "trips" the electricity. The device will remain hot and stay "tripped" until the fault is cleared and power is removed.

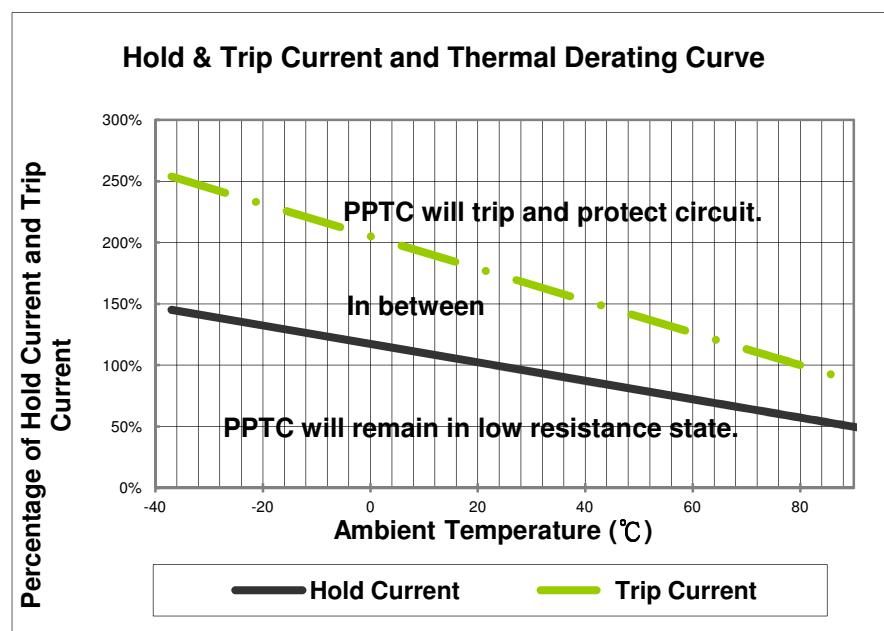

### HOW DOES THE RESETTABLE FUSE WORK

FUZETEC™ resettable fuses are designed and made of patented novel polymeric PTC material in thin chip form, developed solely by FUZETEC™. With electrodes and leads attached on both sides, it is placed in series to protect a circuit. At “normal operating condition” the device remains at an extremely low resistance (milli-ohms) and allows the electrical current to flow through it without any restriction. When overcurrent conditions occur, the polymeric PTC material heats up and its resistance increases sharply. Such a sharp resistance increase (to an insulated status) cuts off the current in the circuit, and consequently protects the element and device in the circuit. Upon fault current being removed, the resettable fuse cools and its resistance drops to the original extremely low value. The resettable fuse is “reset” and allows the current flow through the circuit again.

### TRIP CURRENT, HOLD CURRENT AND THERMAL DERATING

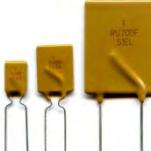

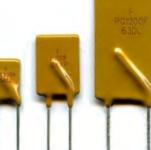

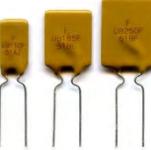

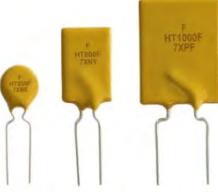

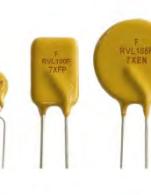

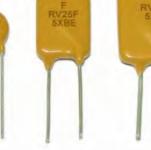

Trip Current ( $I_T$ ) and Hold Current ( $I_H$ ) of FUZETEC™ resettable fuse are rated at 23°C. Typically its Trip Current is twice as much as its Hold Current. FUZETEC™ device does not trip at or below its rated Hold Current, and will trip at or above its Trip Current value. However, due to PTC effect both  $I_T$  and  $I_H$  reduce with ambient temperature increase and vice versa. As shown below, the currents are reduced nearly 50% at 85°C and increased to 150% at -40°C.

#### GLOSSARY

- I<sub>H</sub> : Hold Current - Maximum current at which the device will not trip at 23°C still air.
- I<sub>T</sub> : Trip Current - Minimum current at which the device will always trip at 23°C still air.
- V<sub>MAX</sub> : Maximum voltage device can withstand without damage at its rated current.
- I<sub>MAX</sub> : Maximum fault current device can withstand without damage at rated voltage (VMAX).
- Pd : Maximum power dissipated from device when in tripped state in 23°C still air environment.
- R<sub>MIN</sub> : Minimum device resistance at 23°C.
- R<sub>MAX</sub> : Maximum device resistance at 23°C.
- R<sub>1MAX</sub> : 1) Maximum resistance of device at 23°C measured 1 hour, after tripping for all product series;  
2) or after REFLOW soldering of 260°C for 20 seconds for all SMD series;  
3) or after WAVE soldering of 260°C for less than 5 seconds for all DIP series.
- Special Note : - In the event that TWO of the above three conditions were experienced once each, the acceptance criteria will become 1.3 times of R<sub>1MAX</sub>.  
- In the event that ALL of the above three conditions were experienced once each, the acceptance criteria will become 1.5 times of R<sub>1MAX</sub>.

**Warning:**  - Operation beyond the specified maximum ratings or improper use may result in damage and possible electrical arcing and/or flame.  
 - PPTC device are intended for occasional overcurrent protection. Application for repeated overcurrent condition and/or prolonged trip are not anticipated.  
 - Avoid contact of PPTC device with chemical solvent. Prolonged contact will damage the device performance.

**Warning:** - Operation beyond the specified maximum ratings or improper use may result in damage and possible electrical arcing and/or flame.

- PPTC device are intended for occasional overcurrent protection. Application for repeated overcurrent condition and/or prolonged trip are not anticipated.
- Avoid contact of PPTC device with chemical solvent. Prolonged contact will damage the device performance.

- Warning:**
- Operation beyond the specified maximum ratings or improper use may result in damage and possible electrical arcing and/or flame.
  - PPTC device are intended for occasional overcurrent protection. Application for repeated overcurrent condition and/or prolonged trip are not anticipated.
  - Avoid contact of PPTC device with chemical solvent. Prolonged contact will damage the device performance.

## FHT Series

### RoHS Compliant & Lead Free

**RoHS**

Lead Free

**Application :** Wide variety of electronic equipment

**Product Features :** Very Low resistance, Very High hold current, Solid state, Radial leaded product ideal for up to 16V/30V<sub>DC</sub> and operating temperatures up to 125°C.

**Operation Current :** 0.5A~15.0A

**Maximum Voltage :** 16V/30V<sub>DC</sub>

**Temperature Range :** -40°C to 125°C

**Agency Recognition :** UL(E211981)

## Part Numbering System

## Part Marking System

The diagram illustrates a standard part number label. At the top, the text "Fuzetec Logo" is positioned above a horizontal line. Below this line, the letters "RVL" are followed by four small square boxes, each containing a letter: the first box contains "R", the second "V", the third "L", and the fourth "F". To the right of this section is a vertical line segment with a horizontal bar extending to the right. To the left of this vertical line is another vertical line segment with a horizontal bar extending to the right, creating a stepped shape. To the right of this stepped shape, the text "RoHS Compliant / Lead Free" is written. Below this, the text "Part Identification" and "Product Family" are stacked vertically. At the bottom, there is a horizontal line with a vertical line segment and a horizontal bar extending to the right, similar to the stepped shape above. Below this line are four small square boxes, each containing a letter: the first box contains "P", the second "A", the third "I", and the fourth "D". Finally, at the very bottom, there is a horizontal line with a vertical line segment and a horizontal bar extending to the right, with the text "Date Code/Lot Number" positioned to its right.

**Warning:**

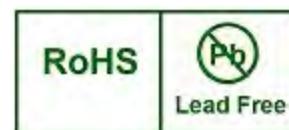

- Each product should be carefully evaluated and tested for their suitability of application.
- Operation beyond the specified maximum ratings or improper use may result in damage and possible electrical arcing and/or flame.
- PPTC device are intended for occasional overcurrent protection. Application for repeated overcurrent condition and/or prolonged trip are not anticipated.
- Avoid contact of PPTC device with chemical solvent, including some inert material such as silicone based oil, lubricant and etc. Prolonged contact will damage the device performance.
- Additional protection mechanism are strongly recommended to be used in conjunction with the PPTC device for protection against abnormal or failure conditions.
- Avoid use of PPTC device in a constrained space such as potting material, housing and containers where have limited space to accommodate device thermal expansion and/or contraction.

## FRV Series

**RoHS Compliant & Lead Free**

**Application :** Line Voltage Power Supply, Transformer and Appliances

**Product Features :** Low hold current, Solid state, Radial leaded product ideal for up to 265V<sub>AC/DC</sub>

**Maximum Operation Current :** 0.05A~2.00A

**Maximum Operating Voltage :** 240V<sub>AC/DC</sub>

**Maximum Interrupt Voltage :** 265V<sub>AC/DC</sub>

**Temperature Range :** -40°C to 85°C

**Agency Recognition :** UL(E211981)

C-UL(E211981)

#### Physical specifications:

Lead material: FRV005-240F~FRV016-240F Tin plated copper, 24AWG.

FRV025-240F~FRV040-240F Tin plated copper, 22AWG.

FRV055-240F~FRV200-240F Tin plated copper, 20AWG.

Soldering characteristics: MIL-STD-202, Method 208E.

Insulating coating: Flame retardant epoxy, meets UL-94V-0 requirement.

**Warning:** - Operation beyond the specified maximum ratings or improper use may result in damage and possible electrical arcing and/or flame.

- PPTC device are intended for occasional overcurrent protection. Application for repeated overcurrent condition and/or prolonged trip are not anticipated.
- Avoid contact of PPTC device with chemical solvent. Prolonged contact will damage the device performance..

#### FSMD1210 Series

#### RoHS Compliant & Halogen Free

**Application:** All high-density boards

**Product Features:** Small surface mount, Solid state

Faster time to trip than standard SMD devices Lower resistance than standard SMD devices

**Operation Current:** 0.05A~2.00A

**Maximum Voltage:** 6V~60V<sub>DC</sub>

**Temperature Range:** -40°C to 85°C

**Agency Recognition :** UL (E211981)

C-UL (E211981)

TÜV (R50090556)

**Warning:** - Operation beyond the specified maximum ratings or improper use may result in damage and possible electrical arcing and/or flame.  
 - PPTC device are intended for occasional overcurrent protection. Application for repeated overcurrent condition and/or prolonged trip are not anticipated.  
 - Avoid contact of PPTC device with chemical solvent. Prolonged contact will damage the device performance.

#### FSMD0805 Series

**RoHS Compliant & Halogen Free**

**Application :** All high-density boards

**Product Features :** Small surface mountable, Solid state, Faster time to trip than standard SMD devices, Lower resistance than standard SMD devices

**Operation Current :** 0.1A~1.0A

**Maximum Voltage :** 6V~15V<sub>DC</sub>

**Temperature Range :** -40°C to 85°C

**Agency Recognition :** UL (E211981)

**Warning:** - Operation beyond the specified maximum ratings or improper use may result in damage and possible electrical arcing and/or flame.  
 - PPTC device are intended for occasional overcurrent protection. Application for repeated overcurrent condition and/or prolonged trip are not anticipated.  
- Avoid contact of PPTC device with chemical solvent. Prolonged contact will damage the device performance.

## Low Rho INTRODUCTION AND HIGHLIGHT

Low Rho PPTC Resettable Fuse takes advantage of newly developed conductive material technology and manufacturing processing capability; which offer ultra low resistance and miniature device dimension. Fuzetec is pleased to offer Low Rho PPTC device in both SMD and Strap type forms which are ideal for Portable electronics Battery protection/Protection Circuit Module (PCM), high speed data /charging USB 3.0 and other applications where compact space and flexible design are highly required.

## FEATURE

- Ultra Low Resistance
- Smaller Dimension, only 1/4 of Std. Carbon PPTC.
- Less Voltage Drop (Lower Resistance)
- Higher Ihold (same dimension)
- Lower Power Consumption (Smaller Pd)

## TYPICAL APPLICATION

- Portable Electronics : SMART PHONE and TABLET PC....,etc.
- USB 3.0

## HOW Low Rho PPTCs BENEFIT YOUR PORTABLE ELECTRONICS?

- Longer Use/Stand by Time
- Faster Data Transmission rate
- Faster Power Charging Speed
- Low Noise on Signal/Data Transmission
- Lower Power Consumption

## Low Rho FSMD1812 Series

**RoHS Compliant & Halogen Free**

**Application:** All high-density boards

**Product Features:** Small surface mountable, Solid state, Faster time to trip than standard SMD devices, Lower resistance than standard SMD devices

**Operation Current:** 1.4~6.0A

**Maximum Voltage:** 6V

**Temperature Range:** -40°C to 85°C

**Agency Recognition:** UL (E211981)

C-UL (E211981)

TÜV (R50090556)

**Warning:**

- Operation beyond the specified maximum ratings or improper use may result in damage and possible electrical arcing and/or flame.
- PPTC device are intended for occasional overcurrent protection. Application for repeated overcurrent condition and/or prolonged trip are not anticipated.
- Avoid contact of PPTC device with chemical solvent. Prolonged contact will damage the device performance.

## Low Rho FSMD0603 Series

### RoHS Compliant & Halogen Free

**Application:** All high-density boards

**Product Features:** Small surface mountable, Solid state, Faster time to trip than standard SMD devices, Lower resistance than standard SMD devices

**Operation Current:** 0.25~1.00A

**Maximum Voltage:** 6V~9 V<sub>DC</sub>

**Temperature Range:** -40°C to 85°C

**Agency Recognition:** UL (E211981)

## Pad Layouts & Solder Reflow Recommendations

The dimensions in the table below provide the recommended pad layout for Surface Mount Device in different footprints.

**Pad dimensions (Millimeter)**

Device	A Nominal	B Nominal	C Nominal
All 2920 Series	5.10	2.30	5.60
All 1812 Series	3.45	1.78	3.50
All 1210 Series	2.00	1.00	2.80
All 1206 Series	2.00	1.00	1.90
All 0805 Series	1.20	1.00	1.50
All 0603 Series	0.80	0.60	0.80

Profile Feature	Pb-Free Assembly
Average Ramp-Up Rate (Tsmax to Tp)	3 °C/second max.
Preheat :	
Temperature Min (Tsmin)	150 °C
Temperature Max (Tsmax)	200 °C
Time (tsmin to tsmax)	60-180 seconds
Time maintained above:	
Temperature(T <sub>L</sub> )	217 °C
Time (t <sub>L</sub> )	60-150 seconds
Peak/Classification Temperature(Tp) :	260 °C
Time within 5°C of actual Peak :	
Temperature (tp)	20-40 seconds
Ramp-Down Rate :	6 °C/second max.
Time 25 °C to Peak Temperature :	8 minutes max.

Note 1: All temperatures refer to the package, measured on the package body surface.

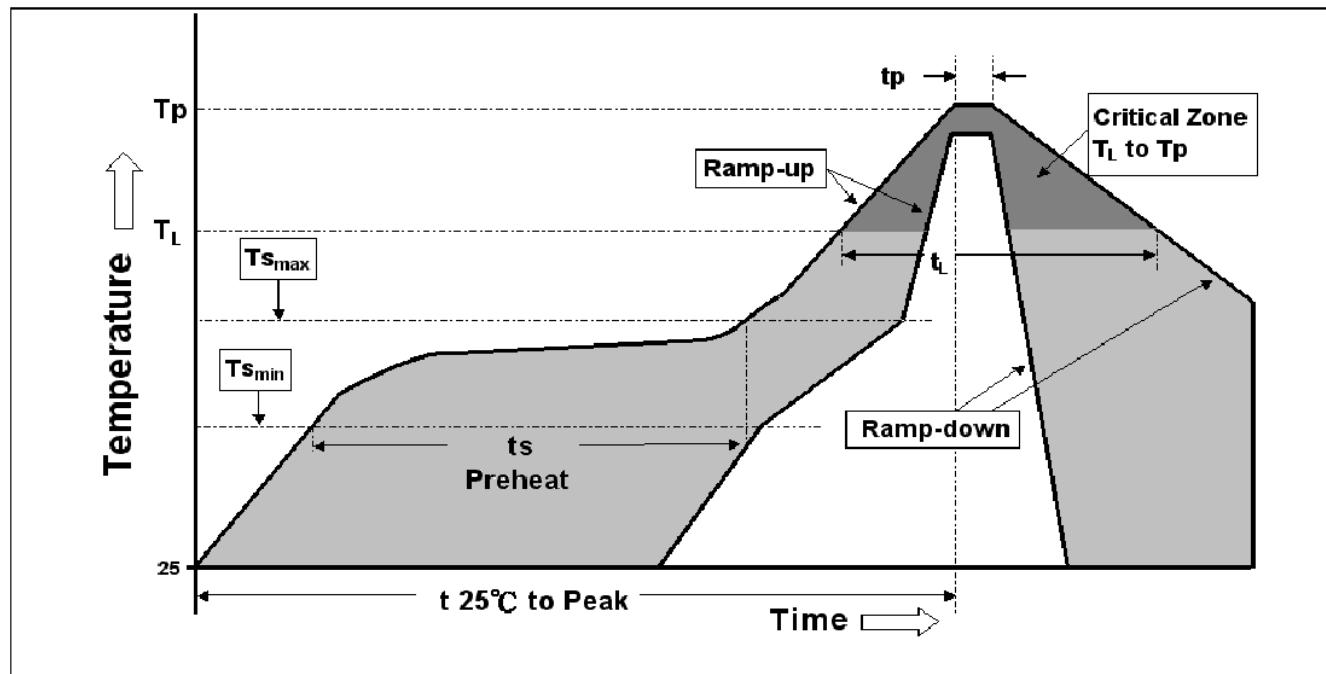

### Solder reflow

※ Due to "Lead Free" nature, Temperature and Dwelling Time for the soldering zone is higher than those for Regular. This may cause damage to other components.

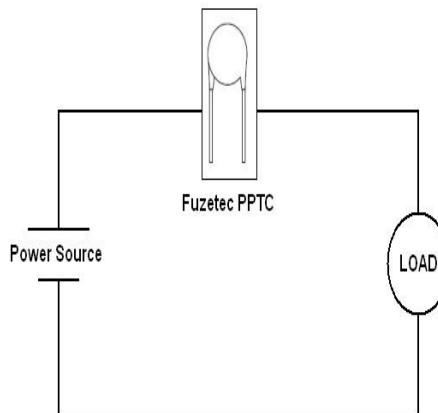

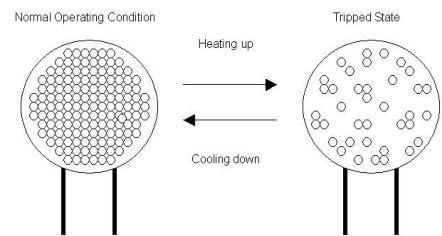

1. Recommended max paste thickness > 0.25mm.
2. Devices can be cleaned using standard methods and aqueous solvent.
3. Rework use standard industry practices.
4. Storage Environment : < 30°C / 60%RH

### Caution:

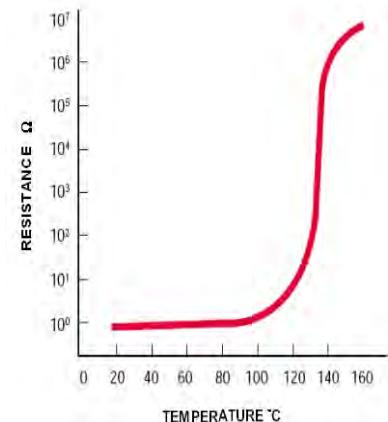

1. If reflow temperatures exceed the recommended profile, devices may not meet the performance requirements.
2. Devices are not designed to be wave soldered to the bottom side of the board

The conductive carbon black particles in Fuzetec's PPTC resettable fuses are dispersed in a polymer that has a crystalline structure. At normal operating conditions there are numerous carbon chains forming conductive paths through the material. Under fault conditions (Tripped State), excessive current flows through the PPTC device and the PTC material heats up making the conductive particles move apart from each other, most of them no longer conduct current and the resistance of the device increases sharply. Upon fault current being removed, the resettable fuse is resetted and allows the current through the circuit again.

When connected in series to a circuit, Fuzetec's PPTC resettable fuses remain at extremely low resistance and allow the electrical current to flow through it without any restriction. When overcurrent situations occur, Fuzetec PPTC resettable fuses limit the current to a very small value and therefore protect the circuit from being damaged by the high current.
