Annex Q (normative)

Voltage dependent resistors (VDRs)

(see 1.5.9.1)

A VDR used in a PRIMARY CIRCUIT shall comply with IEC 61051-2, with the following details.

a) Preferred climatic categories (2.1.1 of IEC 61051-2)

Lower category temperature: - 10 °C

Upper category temperature: + 85 °C

Duration of damp heat, steady state test: 21 days

b) Maximum continuous voltage (2.1.2 of IEC 61051-2)

The maximum continuous a.c. voltage is selected from the list of preferred voltages and shall be at least 120 % of

- the RATED VOLTAGE of the equipment or
- the upper voltage of the RATED VOLTAGE RANGE of the equipment.

c) Pulse current (Table I group 1 of IEC 61051-2)

Combination pulses of 6 kV/3 kA of alternating polarity are used, having a pulse shape of 1,2/50 µs for voltage and 8/20 µs for current.

In addition to the performance requirements of Table I group 1, the clamping voltage after the test shall not have changed by more than 10 % when measured with the manufacturer's specified current.

8/20 μ s 感應雷電流波

O_1 = Virtual Origin of Wave

T = Time from 10% to 90% of Peak

T_1 = Rise Time = $1.25 \times T$

T_2 = Decay Time

Example:

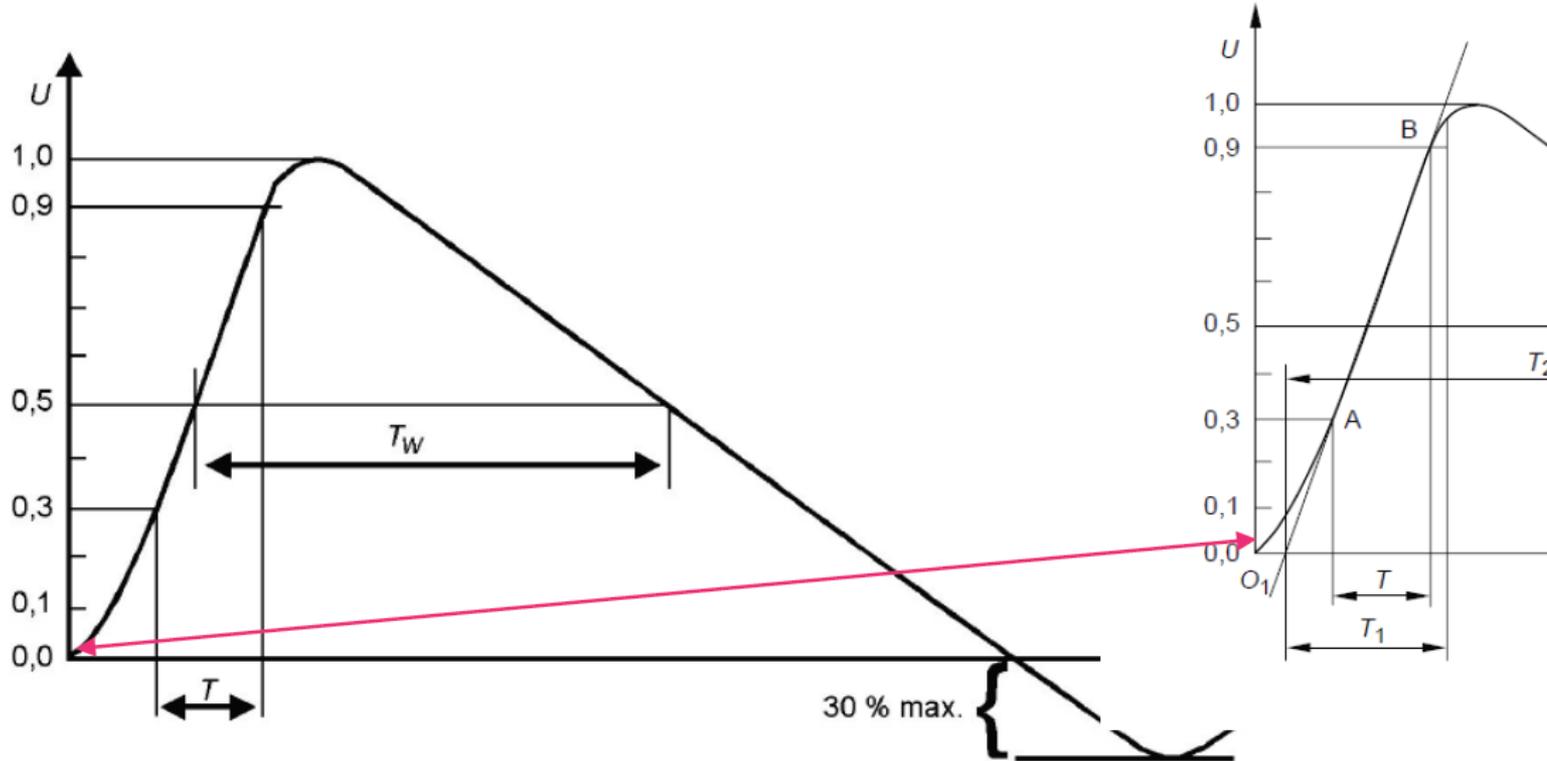

For an 8/20 μ s Current Waveform:

8μ s = T_1 = Rise Time

20μ s = T_2 = Decay Time
