BRIGHT LED ELECTRONICS CORP.

## Features:

1. Emitted Color: Super Blue
2. Lens Appearance : Water Clear
3. Mono-color type.
4. $1.0 \times 0.5 \times 0.4 \mathrm{~mm}(0402)$ standard package
5. Suitable for all SMT assembly methods.
6. Compatible with infrared and vapor phase refold solder process.
7. Compatible with automatic placement equipment.
8. This product doesn't contain restriction Substance, comply ROHS standard.

## Applications:

1. Automotive: Dashboards, stop lamps, turn signals.

## Package Dimensions:

NOTES:
1.All dimensions are in millimeters (inches).
2. Tolerance is $\pm 0.10 \mathrm{~mm}$ ( 0.004 ") unless otherwise specified.
3. Specifications are subject to change without notice.
2. Backlighting: LCDs, Key pads advertising.
3. Status indicators: Comsumer \& industrial electronics.
4. General use.

- Absolute Maximum Ratings( $\mathrm{Ta}=25^{\circ} \mathrm{C}$ )

| Parameter | Symbol | Rating | Unit |
| :--- | :---: | :---: | :---: |
| Power Dissipation | Pd | 70 | mW |
| Forward Current | $\mathrm{I}_{\mathrm{F}}$ | 20 | mA |
| Peak Forward Current $* 1$ | $\mathrm{I}_{\mathrm{FP}}$ | 100 | mA |
| Reverse Voltage | $\mathrm{V}_{\mathrm{R}}$ | 5 | V |
| Operating Temperature | Topr | $-40^{\circ} \mathrm{C} \sim 85^{\circ} \mathrm{C}$ | - |
| Storage Temperature | Tstg | $-40^{\circ} \mathrm{C} \sim 85^{\circ} \mathrm{C}$ | See Page 6 |
| Soldering Temperature | Tsol |  | - |

$* 1$ Condition for IFp is pulse of $1 / 10$ duty and 0.1 msec width.

## Bin Limits

Intensity Bin Limits (At 5mA)

| BIN CODE | Min. (mcd) | Max. (mcd) |
| :---: | :---: | :---: |
| K | 12.3 | 18.5 |
| L | 18.5 | 28 |
| M | 28 | 42 |
| N | 42 | 63 |

Tolerance for each Bin limit is $\pm 15$ \%.

Color Bin Limits (At 5mA)

| BIN CODE | Min. (nm) | Max. (nm) |
| :---: | :---: | :---: |
| 4 | 465 | 470 |

Tolerance for each Bin limit is $\pm 1 \mathrm{~nm}$.
$V_{F}$ Bin Limits (At 5mA)

| BIN CODE | Min.(v) | Max.(v) |
| :---: | :---: | :---: |
| E | 2.4 | 2.6 |
| F | 2.6 | 2.8 |
| G | 2.8 | 3.0 |
| H | 3.0 | 3.2 |

Tolerance for each Bin limit is $\pm 0.05 \mathrm{~V}$.

Judgment criteria of failure for the reliability

| Measuring items | Symbol | Measuring conditions | Judgement criteria for failure |
| :---: | :---: | :---: | :---: |
| Forward voltage | $\mathrm{V}_{\mathrm{F}}(\mathrm{V})$ | $\mathrm{I}_{\mathrm{F}}=5 \mathrm{~mA}$ | Initial Level*1.1 |
| Reverse current | $\mathrm{I}_{\mathrm{R}}(\mathrm{uA})$ | $\mathrm{V}_{\mathrm{R}}=5 \mathrm{~V}$ | Over U*2 |
| Luminous intensity | $\mathrm{IV}(\mathrm{mcd})$ | $\mathrm{I}_{\mathrm{F}}=5 \mathrm{~mA}$ | Initial Level* 0.7 |

Note: $1 . U$ means the upper limit of specified characteristics.
2.Measurment shall be taken between 2 hours and after the test pieces have been returned to normal ambient conditions after completion of each test.

## OIR-Reflow Soldering

1. Avoid any external stress applied to the resin while the LEDs are at high temperature, especially during soldering .
2. Avoid rapid cooling or any excess vibration during temperature ramp-down process
3. Although the soldering condition is recommended above, soldering at the lowest possible temperature is feasible for the LEDs

BRIGHT LED ELECTRONICS CORP.

## Dip Soldering

1. Please avoid any external stress applied to the lead-frames and epoxy while the LEDs are at high temperature,especially during soldering
2. DIP soldering and hand soldering should not be done more than one time.
3. After soldering, avoid the epoxy lens from mechanical shock or vibration until the LEDs are back to room temerature.
4. Avoid rapid cooling during temperature ramp-down process
5. Although the soldering condition is recommended above, soldering at the lowest possible temperature is feasible for the LEDs

## - IRON Soldering

$300^{\circ} \mathrm{C}$ Within 3 sec.,One time only.

## BRIGHT LED ELECTRONICS CORP.

## Notes for designing:

Care must be taken to provide the current limiting resistor in the circuit so as to drive the BRIGHT LEDs within the rated figures. Also, caution should be taken not to overload BRIGHT LEDs with instantaneous voltage at the turning ON and OFF of the circuit.
When using the pulse drive care must be taken to keep the average current within the rated figures. Also, the circuit should be designed so as be subjected to reverse voltage when turning off the BRIGHT LEDs.

## - Storage:

In order to avoid the absorption of moisture, it is recommended to solder BRIGHT LEDs as soon as possible after unpacking the sealed envelope.

If the envelope is still packed, to store it in the environment as following:
(1) Temperature: $5^{\circ} \mathrm{C}-30^{\circ} \mathrm{C}\left(41^{\circ} \mathrm{F}\right)$ Humidity : RH $60 \%$ Max.
(2) After this bag is opened, devices that will be applied to infrared reflow, vapor-phase reflow, or equivalent soldering process must be:
a. Completed within 168 hours.
b. Stored at less than $30 \% \mathrm{RH}$.
(3) Devices require baking before mounting, if:
(2) $a$ or (2) $b$ is not met.
(4) If baking is required, devices must be baked under below conditions: 48 hours at $60^{\circ} \mathrm{C} \pm 3^{\circ} \mathrm{C}$.

- Package and Label of Products:
(1) Package: Products are packed in one bag of 3000 pcs (one taping reel) and a label is attached on each bag.
(2) Label:

## Manufacture Location
