

## 3A Ultra Low Dropout Voltage Regulator with Internal Soft-Start (60uS)

### General Description

The EMP8170/A series can drive 3A of continuous output loading and provide a good performance with a typical dropout voltage as 280mV through an internal n-channel power MOSFETs. The output voltage can be adjustable from 0.8V to  $V_{out}$  that could be very close to  $V_{in}$ .

There are two power supplies pins for the linear regulator. The control circuitry in this linear regulator requires a supply  $V_{CTRL}$  and the driver, the n-channel MOSFET, uses another one.

The EMP8170/A series provide a stable output voltage with an output capacitor as low as 10uF. In order to prevent the linear regulator get damage from thermal increasing, the EMP8170/A series provide fold-back over loading protection and over temperature protection features. An internal soft-start or adjustable soft-start by SS pin can minimizes capacitive inrush current on the input power source during start-up. PG stay low until the output reaches 92% of value that is settled during start-up.

The EMP8170/A series are available in E-SOP-8L package.

### Applications

- High Efficiency Linear Regulators
- DSP Core and I/O Voltage
- Post Regulator for Switching Power

### Features

- Input Voltage Range : +1.0V to +5.5V
- Maximum Output Current : 3A
- RDS-on: 95mohm
- Dropout Voltage : 280mV @  $I_{out}=3A$   
( $V_{out}=0.8V$ ,  $V_{CTRL}=5V$ )
- $\pm 2\%$  Output Voltage Accuracy
- High Ripple Rejection : >60 dB @  $I_{out}=1.5A$   
( $V_{out}=0.8V$ ,  $V_{CTRL}=5V$ ,  $C_{SS}=10nF$ )
- Fold back short circuit protection
- Thermal Overload Shutdown Protection
- Under Voltage Protection
- Power Good Indicator (Open-Drain)
- Internal soft-start 60us
- Soft-Start Pin Provides Startup with Ramp Time Set by External Capacitor

### Typical Application

## Connection Diagrams

## Order Information

EMP8170#-XXSG08NRR

# Null: EN pin with pull-low resistor

A: EN pin with pull-high resistor

XX Output voltage version

Example,

00, Output Voltage adjustable

12, Output Voltage 1.2V

33, Output Voltage 3.3V

SG08 E-SOP-8L Package (Package Code)

NRR RoHS & Halogen free package

Commercial Grade Temperature

Rating: -40 to 85°C

Package in Tape & Reel

## Order, Marking & Packing Information

| Package  | Vout | EN Resister | Product ID.        | Marking | Packing              |
|----------|------|-------------|--------------------|---------|----------------------|
| E-SOP-8L | ADJ  | Pull-low    | EMP8170-00SG08NRR  |         | Tape & Reel<br>3kpcs |
| E-SOP-8L | ADJ  | Pull-high   | EMP8170A-00SG08NRR |         | Tape & Reel<br>3kpcs |

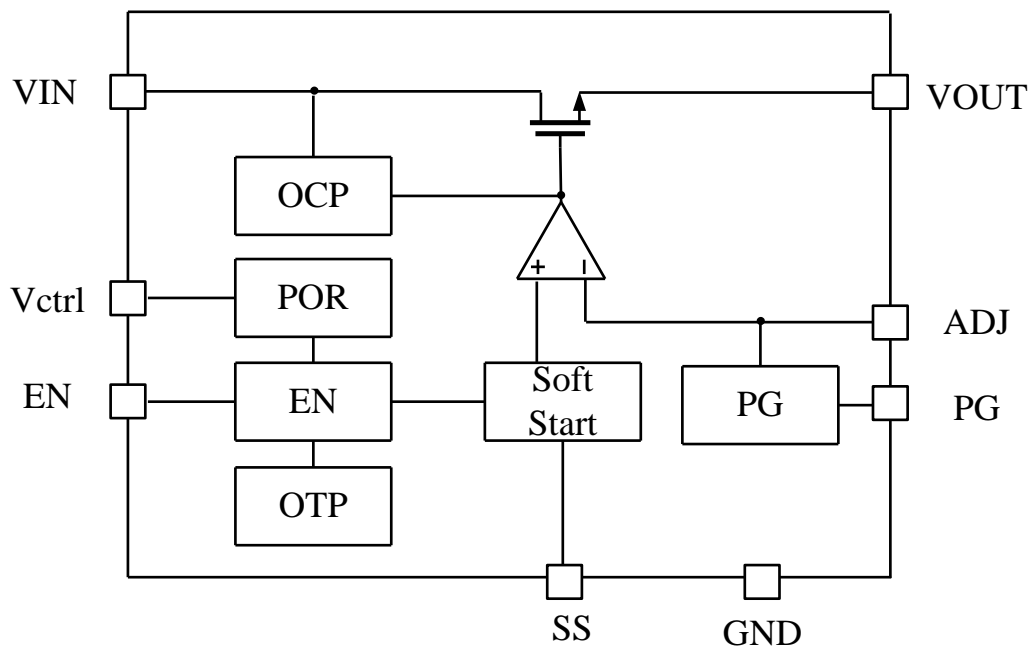

**Note.** The product ID. not listed in above, that's by request.

**Device comparison table**

| Product         | Iout      | EN state in Chip Internally    | Soft-Start time in chip internally |
|-----------------|-----------|--------------------------------|------------------------------------|

| Exposed Pad       | 9        | <b>Thermal Pad</b><br>This pin must be connected to ground. The thermal pad with large thermal land area on the PCB will helpful chip power dissipation.   |

**Functional Block Diagram****FIG.1. Functional Block Diagram of EMP8170/A**

## Absolute Maximum Ratings (Notes 1, 2)

|  |                        |                                       |        |
|--|------------------------|---------------------------------------|--------|
| Supply voltage ( $V_{IN}$ and $V_{CTRL}$ ) | -0.3V to 7V            | Lead Temperature (Soldering, 10 sec.) | 260°C  |
| $V_{OUT}$                                  | -0.3V to 3V            | ESD Rating                            |        |
| I/O pins (PG, EN, ADJ, SS)                 | -0.3V to $V_{IN}+0.3V$ | - Human Body Model                    | +2KV   |
| Power Dissipation                          | (Note 3)               | - Charged device Model                | +500V  |
| Storage Temperature Range                  | -55°C to 150°C         | - Latch-up                            | +200mA |
| Junction Temperature ( $T_J$ )             | 150°C                  |                                       |        |

## Operating Ratings (Note 1, 2)

|                               |            |                                |                |
|-------------------------------|------------|--------------------------------|----------------|
| Supply Voltage ( $V_{CTRL}$ ) | 3V to 6V   | Operating Temperature Range    | -40°C to 85°C  |
| Supply Voltage ( $V_{IN}$ )   | 1V to 5.5V | Junction Operating Temperature | -40°C to 125°C |

**Note 1:** Absolute Maximum ratings indicate limits beyond which damage may occur. Electrical specifications do not apply when operating the device outside of its rated operating conditions.

**Note 2:** All voltages are with respect to the potential at the ground pin.

**Note 3:**  $T_J$  is a function of the ambient temperature  $T_A$  and power dissipation  $P_D$  ( $T_J = T_A + (P_D) \cdot \theta_{JA}$ )).

## Thermal data

| Package  | Thermal resistance             | Parameter              | Value  |
|----------|--------------------------------|------------------------|--------|
| E-SOP-8L | $\theta_{JA}$ (Note 4)         | Junction-to-ambient    | 50°C/W |
|          | $\theta_{JC(top)}$ (Note 5)    | Junction-case (top)    | 39°C/W |
|          | $\theta_{JC(bottom)}$ (Note 6) | Junction-case (bottom) | 10°C/W |

**Note 4:**  $\theta_{JA}$  is simulated in the natural convection at  $T_A=25^\circ\text{C}$  on a highly effective thermal conductivity (thermal land area completed with  $>3\times3\text{cm}^2$  area) board (2 layers, 2S0P) according to the JEDEC 51-7 thermal measurement standard.

**Note 5:**  $\theta_{JC(top)}$  represents the heat resistance between the chip junction and the top surface of package.

**Note 6:**  $\theta_{JC(bottom)}$  represents the heat resistance between the chip junction and the center of the exposed pad on the underside of the package.

## Electrical Characteristics

Unless otherwise specified, all limits guaranteed for  $T_A = 25^\circ\text{C}$ ,  $V_{CTRL}=5V$ ,  $V_{OUT}=0.8V$ ,  $V_{IN} = V_{OUT} + 0.5V$ ,  $C_{IN} = C_{OUT} = 10\mu F$ ,  $C_{CTRL}=1\mu F$ ,  $C_{SS}=10nF$ .

| Symbol     | Parameter                                      | Conditions          | Min   | Typ<br>(Note7) | Max             | Units |

| $UV_{VIN,HYS}$   | Under-Voltage hysteresis           | $V_{IN}$ falling   |      | 0.2  |         | V                       |
| $R_{DIS}$        | $V_{OUT}$ discharge Resistance     |  | 80   | 130  | 200     | $\Omega$                |

**Note 7:** Typical Values represent the most likely parametric norm.

**Note 8:** Dropout voltage is measured by reducing  $V_{IN}$  until  $V_{OUT}$  drops to 98% its nominal value.

## Typical Performance Characteristics

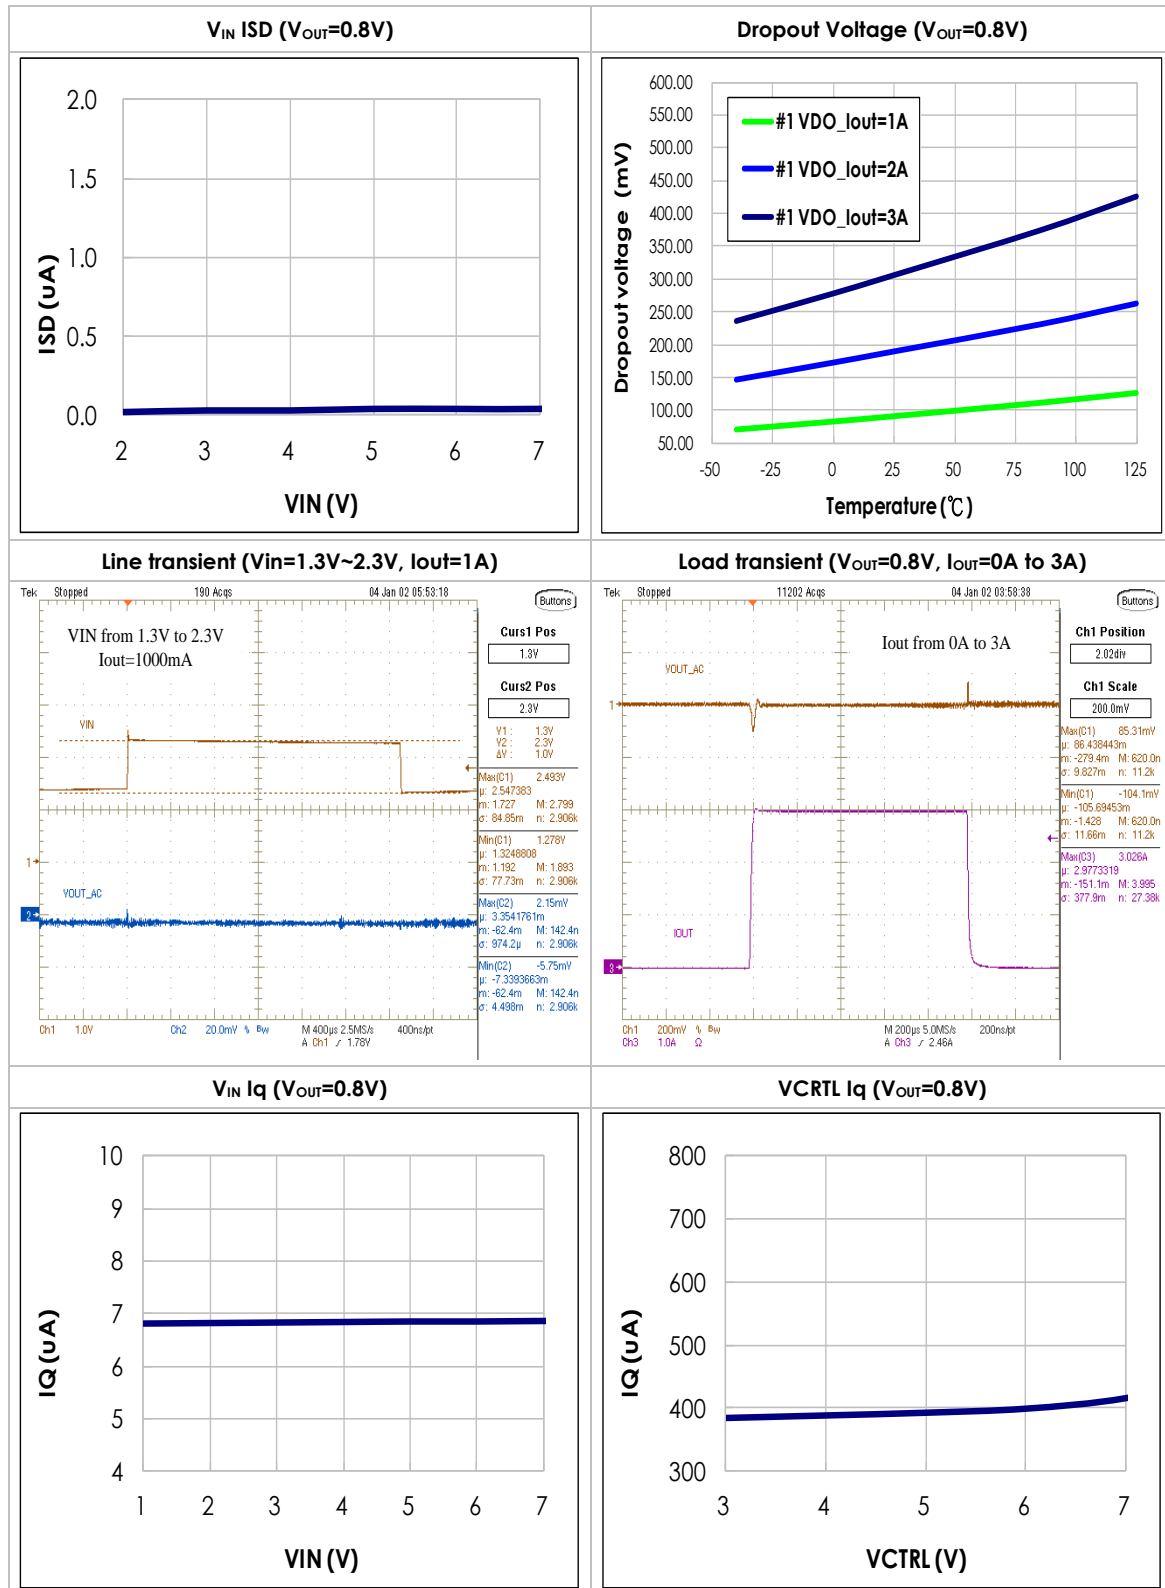

Unless otherwise specified,  $V_{IN} = V_{OUT(NOM)} + 0.5V$ ,  $V_{CTRL} = 5V$ ,  $C_{SS} = 10nF$ ,  $C_{IN} = C_{OUT} = 10\mu F$ ,  $C_{CTRL} = 1\mu F$ ,  $T_A = 25^\circ C$ .

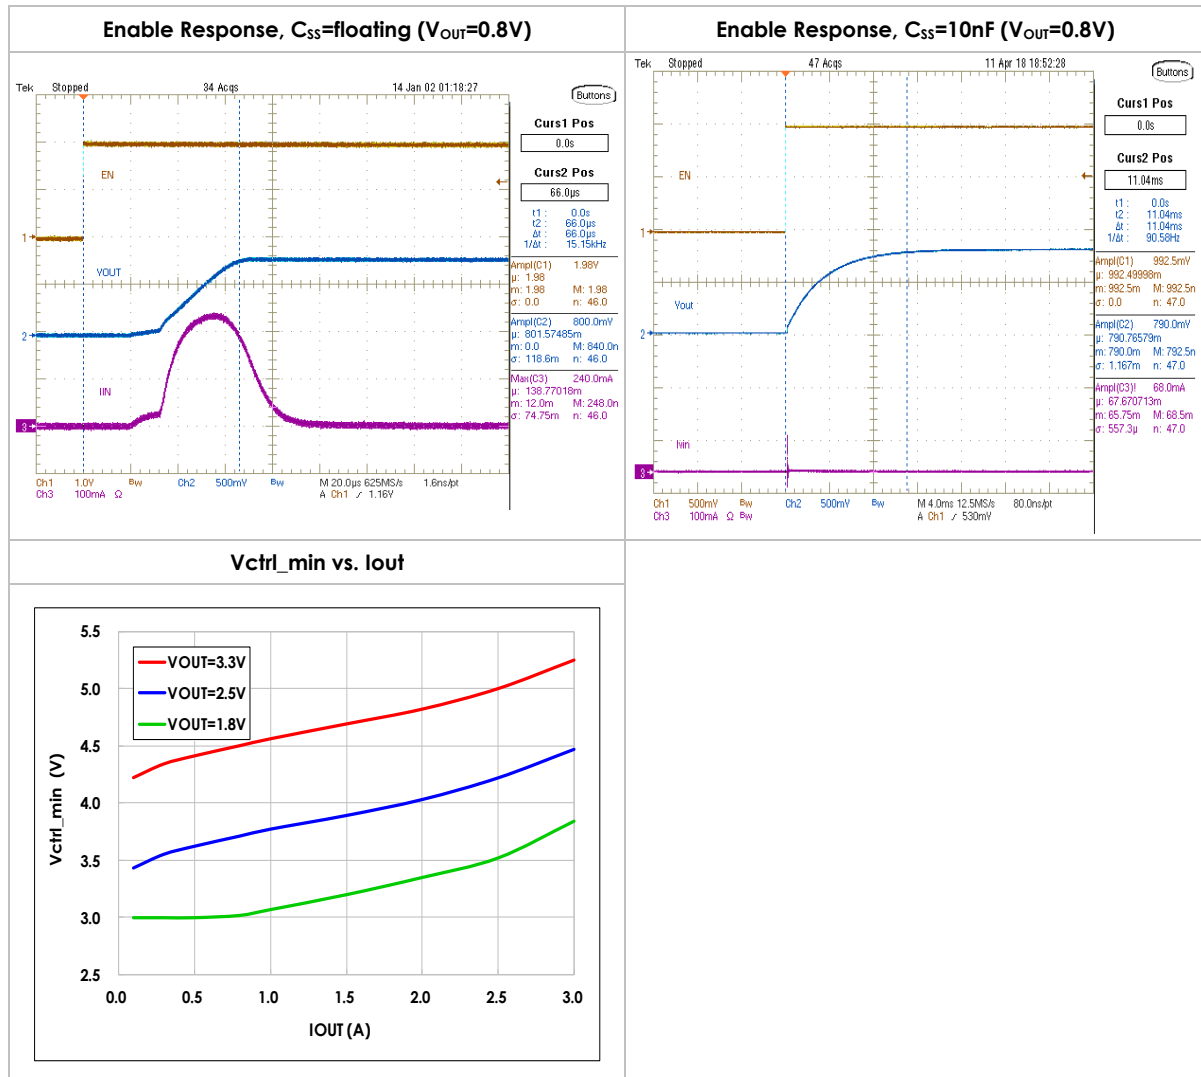

## Typical Performance Characteristics (cont.)

Unless otherwise specified,  $V_{IN} = V_{OUT(NOM)} + 0.5V$ ,  $V_{CTRL}=5V$ ,  $C_{SS}=10nF$ ,  $C_{IN} = C_{OUT} = 10\mu F$ ,  $C_{CTRL}=1\mu F$ ,  $T_A = 25^\circ C$ .

## Typical Performance Characteristics (cont.)

Unless otherwise specified,  $V_{IN} = V_{OUT(NOM)} + 0.5V$ ,  $V_{CTRL}=5V$ ,  $C_{SS}=10nF$ ,  $C_{IN} = C_{OUT} = 10\mu F$ ,  $C_{CTRL}=1\mu F$ ,  $T_A = 25^\circ C$ .

## Application Information

### Output Voltage Setting

The output voltage can be calculated by R1 and R2 for ADJ part.

That is given by the following equation:

$$V_{OUT} = V_{REF} \times \left(1 + \frac{R_1}{R_2}\right) = 0.8 \times \left(1 + \frac{R_1}{R_2}\right)$$

### Output Capacitor

The EMP8170/A series are stable with ceramic output capacitors as low as 10uF. Place the capacitor as close as possible to the IC is recommended.

### Input Capacitor

The 10uF capacitor from VIN to ground is recommended. And, bypass noise from V<sub>CTRL</sub> to ground with a 1uF capacitor is for typical operation condition. Place the capacitor as close as possible to the IC is recommended.

### Power Dissipation and Thermal Shutdown

The power dissipation is defined as

$$P_D = (V_{IN} - V_{OUT}) \times I_{OUT} + V_{CTRL} \times I_{Q.VCTRL}$$

The maximum power dissipation depends on the thermal consumption of IC package, PCB material & PCB design (The copper area of thermal pad) and the junction to ambient thermal resistance and the rate of surrounding airflow.

The maximum power dissipation can be calculated by the following formula:

$$P_{D(Max)} = \frac{(T_J - T_A)}{\theta_{JA}}$$

Where T<sub>J</sub> is the maximum operation junction temperature, 125°C

**Enable**

The enable pin (EN) of the EMP8170 is pulled down by an internal 400kohm resistor. The EN pin is in the logic low when  $V_{EN} < 0.4V$  or floating, the regulator will be shut down, and the shutdown current is less than 1uA, both for  $V_{CTRL}$  and  $V_{IN}$ . The EN pin is in the logic high when  $V_{EN} > 1.2V$ , the regulator will be enabled and restarts a soft-start cycle. The other one option, the enable pin of the EMP8170A is pulled up with a 400kohm resistor internally, and the shutdown current of  $V_{CTRL}$  is around 14uA.

**Power Good indicator**

The power good (PG) pin is an open-drain output. Usually, it is connected to  $V_{out}$  or other pin which has ability to drive this pin through an external pull-up resistor. The PG pin will be high if the output is good enough. As the output voltage arrives 92% of the desired value, the PG pin will be high after a 60us delay time. As the output voltage or supply voltages fall lower than the falling threshold respectively, the PG pin will be low immediately.

**Soft-start time**

The EMP8170/A series have an internal soft start time is about 60us during the output voltage from 0% to 95% and an external soft start time could be calculated by the function  $T_{ss}$  (sec.). The following shows how to choose a soft start capacitor and build an expected start time. The  $R_{ss}$  is 220KΩ designed in chip internally.  $T_{ss}$  is ~0.95ms if  $C_{ss}$  is 1nF adopted.

$$T_{ss(\text{sec.})} \cong 4.3 \times R_{ss} \times C_{ss} \cong 4.3 \times 220K \times C_{ss}$$

**Application Circuit for Fixed output**

### Exposed pad

|    | Dimension in mm |      |
|----|-----------------|------|
|    | Min             | Max  |
| D2 | 2.80            | 3.50 |
| E2 | 2.00            | 2.60 |

**Revision History**

| Revision | Date       | Description   |
|----------|------------|---|
| 0.1      | 2018.06.21 | Initial version.  |
| 0.2      | 2018.09.05 | 1. Tss <sub>INT</sub> change to 60us.<br>2. PG <sub>Delay</sub> change to 0.24ms.<br>3. Add Tss <sub>INT</sub> waveform.  |
| 0.3      | 2018.09.14 | 1. Modify order information description.<br>2. Remove EMP8170A E-SOP-8L ADJ version package information.  |
| 0.4      | 2018.10.25 | 1. Changed the description EMP8170 to EMP8170/A.<br>2. Title changed to "3A Ultra Low Dropout Voltage Regulator with Internal Soft-Start (60uS)".<br>3. Added "Note. The product ID. not listed in above, that's by request." Into order information .<br>4. Added device comparison table.<br>5. Added application circuit for fixed output. |
| 0.5      | 2018.01.30 | 1. Revised the Exposed pad table.   |
| 0.6      | 2019.03.06 | 1.Add new product ID  |
| 0.7      | 2020.03.03 | 1.Revise Vout range spec.<br>2.Add Vctrl_min vs. Iout measurement plot.   |
| 1.0      | 2021.01.15 | 1.Remove preliminary symbol   |
| 1.1      | 2021.07.14 | Modify E-SOP-8 Dimension  |
