

### GROUND FAULT INTERRUPTER

#### DESCRIPTION

The UTC **GF4149** is a low-power controller for detecting hazardous current paths to ground and ground-to-neutral faults. The UTC **GF4149** application circuit opens the load contacts before a harmful shock occurs.

The UTC **GF4149** contains a precision bandgap 14V shunt regulator, precision low- $V_{OS}$  sense amplifier, time-delay noise filter, window-detection comparators, and an SCR driver. The SCR driver provides increased current and temperature compensation to allow for a wider selection of external SCRs.

#### FEATURES

- \* Precision Sense Amplifier and Bandgap Reference
- \* Low- $V_{OS}$  Offset
- \* Built-in Noise Filter
- \* High-Current SCR Gate Driver
- \* Adjustable Sensitivity
- \* Low Quiescent Current
- \* Minimum External Components
- \* Ideal for 120V or 220V Systems
