## LINEAR INTEGRATED CIRCUIT

# WHITE LED STEP-UP CONVERTER

#### **DESCRIPTION**

The UTC L5100 is a STEP-UP DC/DC Converter and for driving white LEDs with a constant current. It can drive several LEDs in series by a Li-lon cell. UTC L5100 switches at a high frequency 1.2MHz, so it can allow the use of tiny external components. The output capacitor can be as small as 0.22µF; saving space and cost compare with alternative other solutions. The low 95mV feedback voltage minimizes power loss in the current setting resistor can have better efficiency.

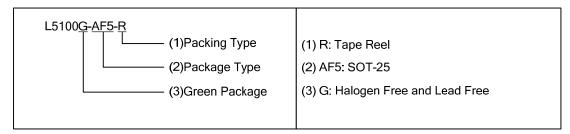

#### **FEATURES**

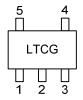

- \* Inherently Matched LED Current
- \* High Efficiency: 83% Typical
- \* Drives Up to Four LEDs from a 3.2V Supply
- \* Drives Up to Six LEDs from a 5V Supply
- \* 36V Rugged Bipolar Switch
- \* 1.2MHz Switching Frequency
- \* Uses Tiny 1mm Tall Inductors
- \* Output Capacitor can be Small to only 0.22µF

#### **■ PIN CONFIGURATION**

#### **■ PIN DESCRIPTION**

PIN NO.	PIN NAME	DESCRIPTION
1	SW	Switch. Connect inductor/diode here. Minimize trace area at this pin to reduce EMI.
2	GND	Ground. Connect directly to local ground plane.
3	I FK	Feedback. Reference voltage is 95mV. Connect cathode of lowest LED and resistor here. Calculate resistor value according to the formula: $R_{FB} = 95 \text{mV/I}_{LED}$
4	SHDN	Shutdown. Connect to 1.5V or higher to enable device; 0.4V or less to disable device.
5	V <sub>IN</sub>	Input Supply Pin. Must be locally bypassed.
