

## LR1198

CMOS IC

### 300mA, ULTRA-LOW NOISE, ULTRA-FAST CMOS LDO REGULATOR

#### DESCRIPTION

The **LR1198** low-noise, low-dropout, linear regulator operates from a 2.5V to 5.5V input and is guaranteed to deliver 300mA. The **LR1198** is designed and optimized for battery-powered systems to work with low noise and low quiescent current. For further reduction of output noise, a noise bypass pin is available.

The **LR1198** also requires only 1 $\mu$ F (typ.) of output capacitance for stability with any load, reducing the amount of board space necessary for power applications, critical in hand-held wireless devices.

The **LR1198** consumes less than 0.01 $\mu$ A in shutdown mode. The other features include ultra low dropout voltage, current limiting protection, thermal shutdown protection and high ripple rejection ratio.

- Notes: 1. Limits beyond which damage to the device may occur is indicated by absolute maximum ratings. Conditions for which the device is intended to be functional is indicated by operating ratings, but specific performance limits isn't be guaranteed. Only for the test conditions listed the guaranteed specifications can be applied. When the device is not operated under the listed test conditions some performance characteristics may degrade.
2. Which discharged through a 1.5k $\Omega$  resistor into each pin is a 100pF capacitor in the human body model.
3. The dropout voltage is defined as  $V_{IN} - V_{OUT}$ , which is measured when  $V_{OUT}$  is  $V_{OUT(NORMAL)} - 100mV$ .
