

3A ULTRA LOW DROPOUT LINEAR REGULATOR

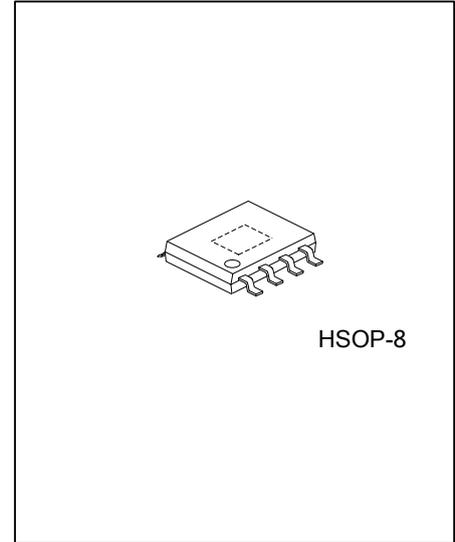

DESCRIPTION

The UTC **LXXLD38** is a typical LDO with the features of very low dropout voltage as low as 0.20V at output current 3A.

For normal operation, two supply voltages are necessary. One called control voltage from other equipment can shutdown the output voltage and it should pull and hold the voltage of EN pin less than 0.4V. Another one is the main supply voltage whose purpose is for main power conversion, to keep the power dissipation low, and to make the dropout voltage lower.

Internally, in the UTC **LXXLD38**, there're many functions which can be seen in the block figure to prevent the IC from being damaged. Internal Power-On-Reset (POR) circuit can control the two supply voltages to prevent fault operations of the circuit; the thermal shutdown circuit is able to protect the device from over thermal operation, and a current limit function will keep the device work safely under current over-loads.

The UTC **LXXLD38** can be used as an ideal to provide well supply voltage in the applications, such as front-side-bus termination on motherboard, NB applications, front side bus V_{TT} (1.0V/3A) and note book PC applications.

HSOP-8

FEATURES

- * Low Dropout $V_D=0.20V(\text{typ.})@ I_{OUT}=3A$
- * Low ESR Output Capacitor
- * $V_{REF}=0.5V$
- * Fast Transient Response
- * Output Voltage Adjustable through External Resistors
- * POR(Power-On-Reset) controlling V_{CNTL} and V_{IN}
- * With internal Soft-Start
- * Internal Current Limit Protection
- * Internal Under Voltage Protection
- * Hysteretic Thermal Shutdown
- * With Power-OK Output (with a Delay Time)
- * Low Shutdown Quiescent Current ($<30\mu A$)
- * Shutdown/Enable Control Function

PIN DESCRIPTION

PIN NO.	PIN NAME	DESCRIPTION
1	GND	GND pin
2	FB	Feedback pin
3, 4	V _{OUT}	IC power supply pin
5	V _{IN}	Input Voltage
6	V _{CNTL}	CNTL Pin Input Voltage
7	POK	Power OK Output Pin
8	EN	Internal Pull High. EN=high or Floating→ Enable EN=Low→Shutdown mode
