## EARTH LEAKAGE CURRENT DETECTOR

## - DESCRIPTION

The UTC M54123L is a semiconductor integrated circuit with amplifier for a high-speed earth leakage circuit breaker.

For the amplifying parts of earth leakage circuit breaker, the UTC M54123L consists of differential amplifier, latch circuit and voltage regulator.

In normal operating, the UTC M54123L should be connected to the secondary side of the ZCT (zero current transformers). Here the ZCT detects leakage current different amplifiers' both input.

Then the signals which have been amplified are integrated by an external capacitor. The integrated signal connects to the input terminal of latch circuit whose output is suitable for the characteristics of high- speed earth leakage circuit breaker.

Until the input voltage reaches the fixed level, latch circuit doesn't become high. Then drives a thyristor which is connected to latch circuit's output terminal. Once the trigger latch circuit, only the power on again to reset.

## - FEATURES

* With good input sensitivity current temperature characteristics
* High input sensitivity : $\mathrm{V}_{\mathrm{T}}=6.1 \mathrm{mV}$ (Typ.)
* Only need low external component count
* High noise and surge-proof
* Low power dissipation : $\mathrm{P}_{\mathrm{D}}=5 \mathrm{~mW}$ (Typ.)
* May be used both as 100 V and 200 V .
* Wide temperature range : from $-20^{\circ} \mathrm{C}$ to $+80^{\circ} \mathrm{C}$

## ■ ORDERING INFORMATION

| Order Number |  | Package | Packing |
| :---: | :---: | :---: | :---: |
| Lead Free | Halogen Free |  |  |
| M54123LK-D08-T | M54123LG-D08-T | DIP-8 | Tube |
| M54123LK-G08-T | M54123LG-G08-T | SIP-8 | Tape Reel |
| M54123LK-S08-R | M54123LG-S08-R | SOP-8 |  |

(1)Packing Type
(2)Package Type
(3)Green Package

|  | (1)Packing Type <br> (2)Package Type <br> (3)Green Package | (1) T: Tube, R: Tape Reel <br> (2) D08: DIP-8, G08:SIP-8, S08:SOP-8 <br> (3) K: Lead Free, G: Aalogên Free and Lead Free |

- MARKING

| DIP-8 | SIP-8 | SOP-8 |
| :---: | :---: | :---: |
|  |  |  |

- PIN CONFIGURATIONS

- PIN DESCRIPTION

| PIN NO. | PIN NAME |  |
| :---: | :---: | :--- |
| 1 | $\mathrm{~V}_{\mathrm{R}}$ | Reference voltage terminal |
| 2 | IN | Input terminal |
| 3 | GND | Ground |
| 4 | $\mathrm{O}_{\mathrm{D}}$ | Differential amplifier output terminal |
| 5 | $\mathrm{~S}_{\mathrm{C}}$ | Latch input terminal |
| 6 | $\mathrm{~N}_{\mathrm{R}}$ | Terminal for noise absorption |
| 7 | $\mathrm{O}_{\mathrm{S}}$ | Output terminal |
| 8 | $\mathrm{~V}_{\mathrm{S}}$ | Supply voltage terminal |

- BLOCK DIAGRAM

■ ABSOLUTE MAXIMUM RATING (unless otherwise specified)

| PARAMETER |  | SYMBOL | RATINGS | UNIT |
| :---: | :---: | :---: | :---: | :---: |
| Supply Current |  | Is | 8 | mA |
| $\mathrm{V}_{\mathrm{R}}$ Pin Current | Between $\mathrm{V}_{\mathrm{R}}-\mathrm{IN}$ (Note 2) | IVR | 250 | mA |
|  | Between $\mathrm{V}_{\mathrm{R}}$-GND |  | 30 | mA |
|  | Between IN-V $\mathrm{V}_{\mathrm{R}}$ (Note 2) |  | -250 | mA |
| IN Terminal Current | Between IN-V ${ }_{\text {R }}$ (Note 2) | $\mathrm{I}_{\mathrm{N}}$ | 250 | mA |
|  | Between IN-GND |  | 30 | mA |
|  | Between $\mathrm{V}_{\mathrm{R}}$-IN (Note 2) |  | -250 | mA |
| S ${ }_{\text {c }}$ Terminal Current |  | Isc | 5 | mA |
| Power Dissipation |  | $\mathrm{P}_{\mathrm{D}}$ | 200 | mW |
| Operating Temperature |  | Topr | $-20 \sim+80$ | ${ }^{\circ} \mathrm{C}$ |
| Storage Temperature |  | $\mathrm{T}_{\text {STG }}$ | $-55 \sim+125$ | ${ }^{\circ} \mathrm{C}$ |

Notes: 1. Absolute maximum ratings are those values beyond which the device could be permanently damaged. Absolute maximum ratings are stress ratings only and functional device operation is not implied.
2. Current value between $V_{R}$ and $I N$, and between $I N$ and $V_{R}$ is less than 1 ms in the pulse width, and duty cycle is less than $12 \%$, In applying AC current continuously, it is 100 mA in the off-state.

- RECOMMENDED OPERATING CONDITIONS (unless otherwise specified)

| PARAMETER | SYMBOL | MIN | TYP | MAX | UNIT |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Supply Voltage When Latch Circuit Is Off-State | $\mathrm{V}_{\mathrm{S}}$ | 12 |  |  | V |
| External Capacitor Between Vs and GND | $\mathrm{C}_{\text {Vs }}$ | 1 |  |  | $\mu \mathrm{~F}$ |
| External Capacitor Between Os and GND | $\mathrm{C}_{\text {os }}$ |  |  | 1 | $\mu \mathrm{~F}$ |

- ELECTRICAL CHARACTERISTICS ( $\mathrm{T}_{\mathrm{A}}=-20 \sim+80^{\circ} \mathrm{C}$, unless otherwise specified)

| PARAMETER | SYMBOL | TEST CONDITIONS |  | MIN | TYP | MAX | UNIT |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Operating Time (Note 7) | Ton | $V_{S}=16 V_{S} V_{R}-V_{V}=0.3 V, T_{A}=25^{\circ} \mathrm{C}$$\text { (See Test Circuit } 14)^{\circ}$ |  | 2 |  | 4 | ms |

## - ELECTRICAL CHARACTERISTICS (Cont.)

## Notes: 1. Typical values are at $\mathrm{T}_{\mathrm{A}}=25^{\circ} \mathrm{C}$

2. When standard value of voltage $(60 \mathrm{~Hz})$ between $\mathrm{V}_{\mathrm{R}}$ and $\mathrm{V}_{1}$ is minimum, and output $\mathrm{O}_{\mathrm{s}}$ is low-level, or when standard value of voltage $(60 \mathrm{~Hz})$ between $V_{R}$ and $V_{1}$ is maximum, and output $O_{S}$ is high-level, it is considered as a good one.
3. When standard value of voltage $\mathrm{V}_{\mathrm{SC}(0 \mathrm{~N})}$ is minimum, and output $\mathrm{O}_{\mathrm{S}}$ is low-level, or when standard value of voltage $\mathrm{V}_{\mathrm{SC}(\mathrm{ON})}$ is maximum, and output $\mathrm{O}_{\mathrm{S}}$ is high-level, it is considered as a good one.
4. Supply current 2 is necessary to keep high in output Os .
5. After applying 30 mV between $\mathrm{V}_{\mathrm{R}}$ and $\mathrm{V}_{I}$ and shorting between them, it is considered as a good one if standard value of IGT flows out of output $\mathrm{O}_{\mathrm{s}}$.
6. After supply voltage applies 12 V and output $\mathrm{O}_{\mathrm{s}}$ is high-level, it is considered as a good one in the standard value of supply voltage and in the low-level of output $\mathrm{O}_{\mathrm{s}}$.
7. Operating time is a time from applying fixed input till operating latch circuit in $0.047 \mu \mathrm{~F}$ between $\mathrm{O}_{\mathrm{D}}$ and GND.

■ TEST CIRCUITS

- TYPICAL APPLICATION CIRCUIT

High-Speed Leakage Circuit Breaker With UTC M54123L

Note: Gate current must be selected.
Please select voltage resistance by AC supply voltage
Note: The value of R1, R2, C4, and C5 should be chosen in order to keep at least 12 V in Vs .
Please connect C4 ( $>1 \mu \mathrm{~F}$ ) and C2 ( $<1 \mu \mathrm{~F}$ ).
ZCT and load resistance $R_{L}$ of ZCT are connected between input pin 1 and 2.
Protective resistance ( $R_{P}=100 \Omega$ ) must be insurted.
$R_{L}$ and amplifier's output (in Pin 4) regulates sensitivity current
External capacitor C1 between pin 4 and GND is used for noise removal.
Please connect a varistor or a diode ( 2 pcs.) to ZCT in parallel, because of when large current is grounded in the primary side (AC line) of ZCT, the following situation can be abandoned: The wave form in the secondary side of ZCT is distorted and some signals do not appear in the output of amplifier.
Please connect capacitor (about $0.047 \mu \mathrm{~F}$ ) between pin 6 and pin 7 .
Capacitor C6 between pin 1 and GND is about $0.047 \mu \mathrm{~F}$ for removing noise.

■ TYPICAL CHARACTERISTICS

Vcc voltage generates by the constant voltage circuit in IC.
This is measured not by M54123L but by a special element.
