

## U74LVC640

CMOS IC

### OCTAL BUS TRANSCEIVER WITH 3-STATE INVERTING OUTPUTS

#### DESCRIPTION

The **U74LVC640** is designed for asynchronous communication between data buses and has inverting outputs. While the direction-control(DIR) input is high, data transmits from the A bus to the B bus. In contrast, Data transmits from the B bus to the A bus DIR input is low. The output-enable( $\overline{OE}$ ) will disable the device and isolate from the buses when high voltage is applied on it.

#### FEATURES

- \* Supply Voltage Range From 1.2V to 3.6V
- \* Input Accept Voltages up to 5.5V
- \* Partial-Power-Down Mode Operation
- \* Max  $t_{pd}$  is 6.3ns at 3.3V
