

1A, HIGH-EFFICIENCY 1.5MHz/1MHz SYNCHRONOUS STEP-DOWN CONVERTER

■ DESCRIPTION

The UTC **UD05103** is a high-frequency, synchronous, rectified, step-down, switch-mode converter with internal power MOSFETs.

It offers a very compact solution to achieve a 1A continuous output current over from 2.5V to 5.5V input supply range, with excellent load and line regulation.

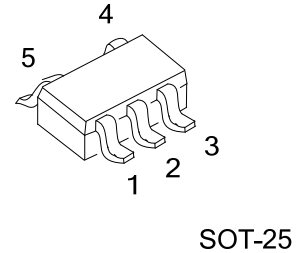

The UTC **UD05103** is ideally suited for portable electronic devices that are powered from 1-cell Li-ion battery or from other power sources such as cellular phones, PDAs, handheld devices, game console and related accessories.

The output voltage is adjustable from 0.6V to the input voltage. During shutdown, the input is disconnected from the output and the shutdown current is less than 1 μ A. Other key features include over-temperature and short circuit protection, and under-voltage lockout to prevent deep battery discharge.

The UTC **UD05103** at 1A maximum output current while consuming only 40 μ A of no-load quiescent current. Ultra-low $R_{DS(ON)}$ integrated MOSFETs and 100% duty cycle operation make the UTC **UD05103** an ideal choice for high-output voltage, high-current applications which require a low dropout threshold.
