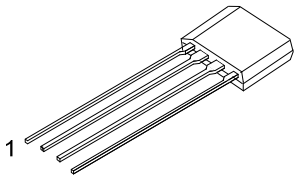
SMART MOTOR DRIVER WITH INTEGRATED HALL SENSOR



SIP-4

■ DESCRIPTION

The **UH357** is a single coil motor driver with integrated Hall sensor. Lock-shutdown and auto-restart function protects the motor from being over-heated and restarts the motor after being locked.

Thermal-shutdown protection (TSD) ensures the internal drivers of IC are operating under a safe operating temperature range.

The **UH357** also uses Soft-switch phase-switching technique to reduce the vibration and acoustic noise.

■ FEATURES

* Soft switching output driver
* Built-in Hall sensor motor driver
* Motor lock protection and automatic restart
* Thermal shutdown protection
* H-Bridge MOS driver
* For 5V or 12V DC motor / FAN systems

■ FUNCTIONAL DESCRIPTIONS

Refer to the block diagram above, **UH357** is composed of the following blocks:

1. Bias generator
The bias generator provides bias references for the analog blocks.

2. Oscillator
The integrated oscillator provides the clock signal for the digital control logics.

3. Power-on Reset
The block of power-on reset is used to detect the power-up ramp and reset the digital circuits.

4. Chopper Amplifier
The chopper amplifier structure can achieve a higher magnetic sensitivity and dynamically removes both the offset and flicker noise at the same time.

5. Digital control logics
Generates controlling signals for the Hall sensor and Coil driver and Timer part.
