CONSTANT CURRENT BOOST CONTROLLER FOR DRIVING HIGH POWER LEDS

DESCRIPTION

The UTC **ULC6001** is a high powered PWM boost converter optimized for constant current applications such as driving one or more strings of high power LEDs.

The output current can be set by an external resistor connected the FB pin and GND. This average current can be reduced by applying a PWM signal to the EN pin.

FEATURES

- * Large Input voltage range: 5V~400V
- * Programmable LED drive current
- * Programmable switching frequency: 500KHz~2.5MHz
- * Single pin for PWM dimming
- * Accurate over the -40~125°C temperature range
